Automation in your hands

Invest more time in high-value tasks
by automating more of the technical work

TM RMM

Features

Asset Discovery

Spend less time reconciling your assets. Automatically discover your network devices, deploy & detect their status, creating accountability & quick access to all managed devices.

Patching

Keep your systems and devices up to date & secure. Centrally configure & deploy Windows and third-party software security patches. Generate reports of your devices patching level compliance.

Automation

Automate repetitive tasks for a more efficient workflow & fix problems as they occur.

Endpoint Management

Gain quick access to each endpoint you manage so you can resolve issues fast & keep downtime to a minimum even without interrupting the end-user.

Monitoring

Remote monitoring & management. Know and resolve issues before they arise.
